

# SITE MAP

Follow this outline to create the content for your project.

This Site Map relates to elements that will be created in the Dreamweaver template and custom button tutorials. Sticking with this Site Map will allow all of the elements to fall easily into place.

The home page should welcome your readers to your site by giving them a clear overview of what they will learn through this project. Subsequent 'Topic' pages will break down the content into digestable segments. Vocabulary pages are acceptable for use of one of the pages. The "About Us" page will introduce the team members. "Citations" will document all of the sources used for research (either MLA or APA). The "Media" page can house any videos, podcasts, animations, music, etc that is created in support of the project. If there is a lot of media, you can choose to embed those elements on the relative Topic page.
